

Administrative/Minor/Significant Revisions, Operational Flexibility and Off-Permit Changes at a Site

Legend

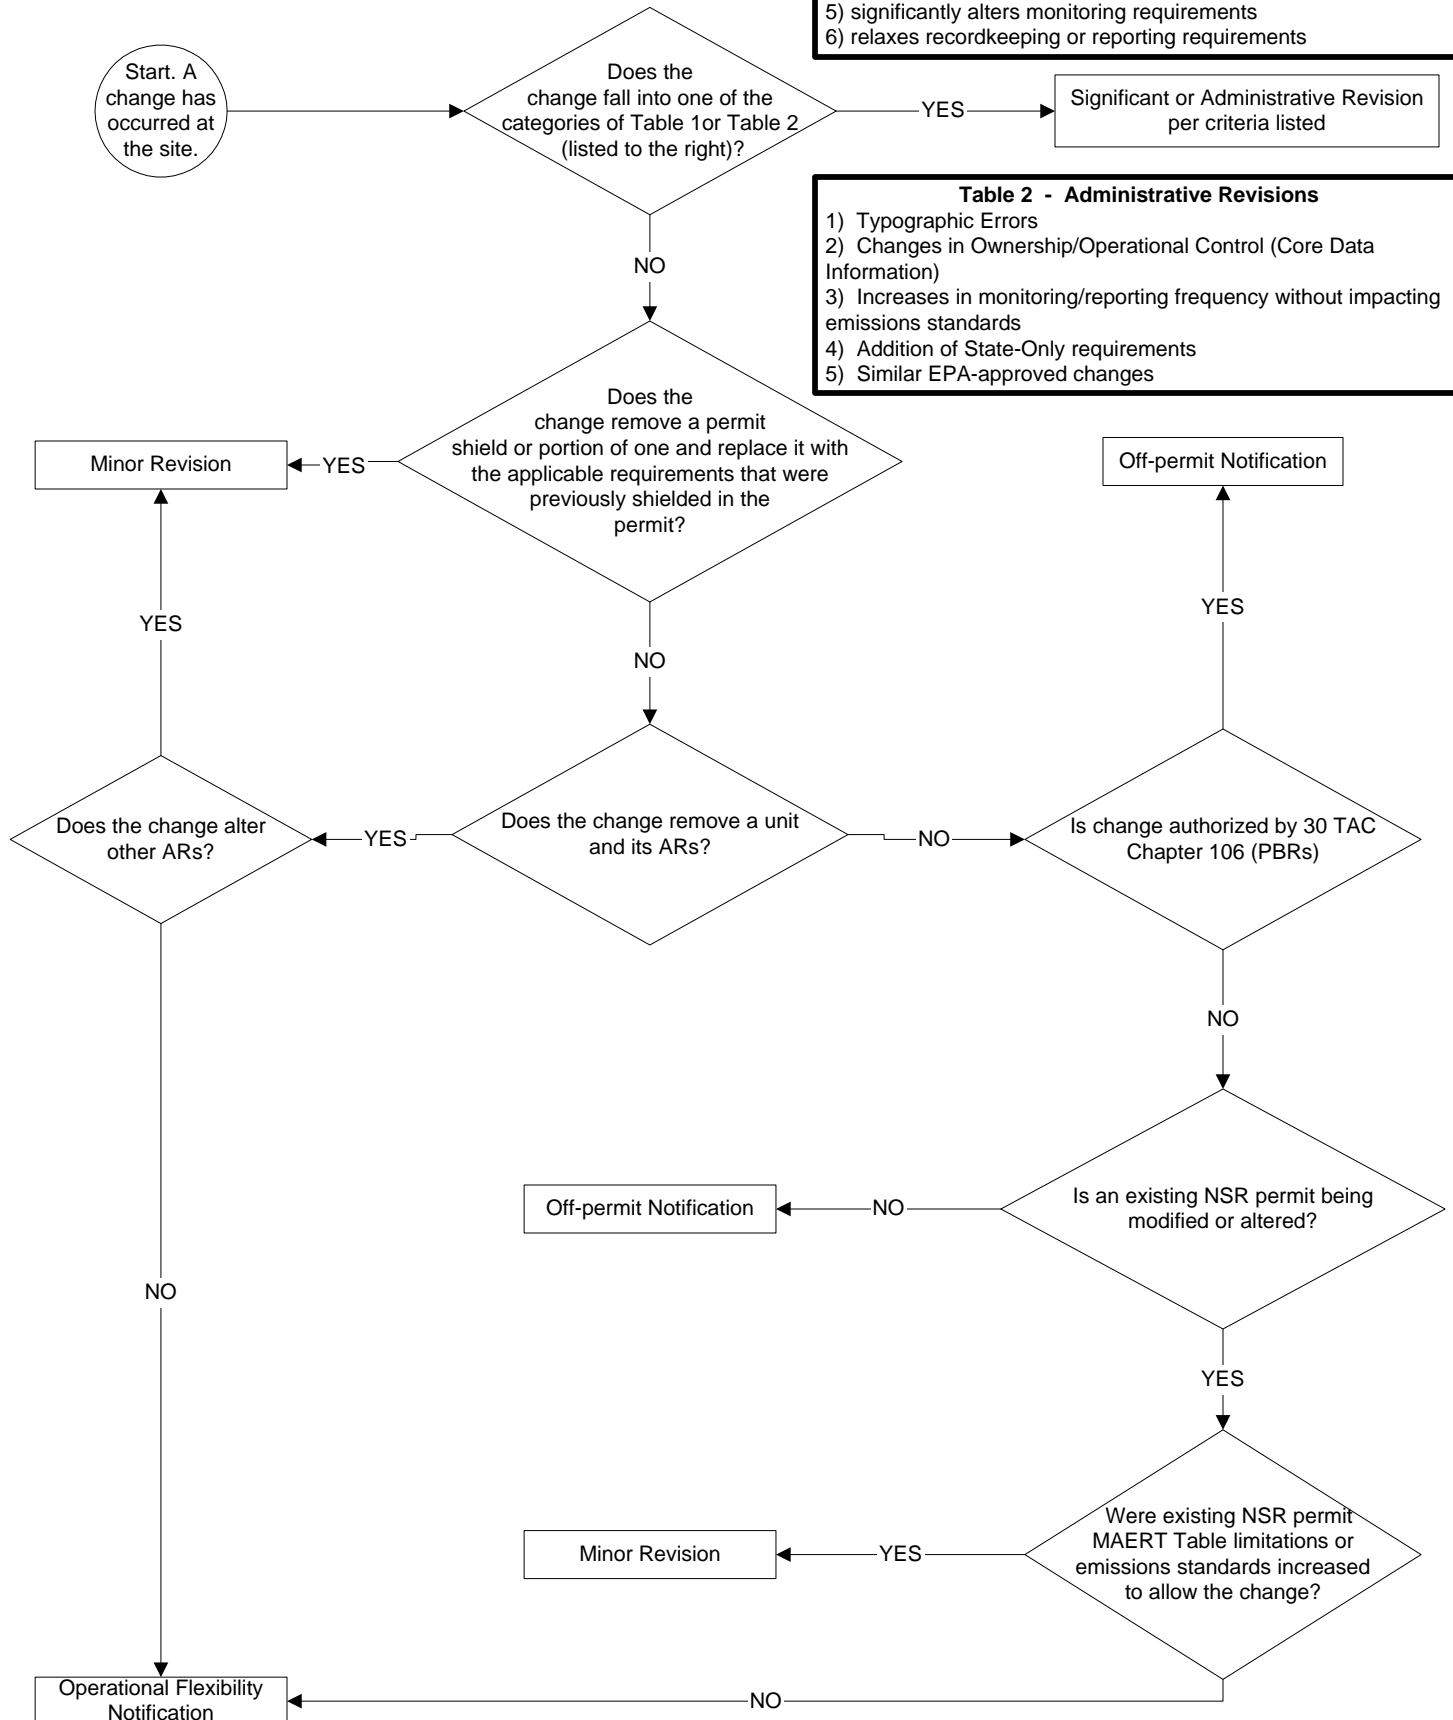

AR: Applicable Requirement
NSR: New Source Review

Table 1 - Significant Revisions

- 1) Title I modification
- 2) adds a permit shield or adds to an existing permit shield
- 3) non-NSR case-by-case determination (AMOC, ARACT, etc.)
- 4) adds a term assumed to avoid another applicable requirement
- 5) significantly alters monitoring requirements
- 6) relaxes recordkeeping or reporting requirements

Table 2 - Administrative Revisions

- 1) Typographic Errors
- 2) Changes in Ownership/Operational Control (Core Data Information)
- 3) Increases in monitoring/reporting frequency without impacting emissions standards
- 4) Addition of State-Only requirements
- 5) Similar EPA-approved changes

Guidance for FOP Revisions, Operational Flexibility, and Off-Permit Changes

Title I modification - Modifications under §111, §112(g) and (j), PSD and Nonattainment permitting.

Adds a permit shield or to an existing permit shield- negative applicability determinations (i.e. determinations that an applicable requirement does not apply) may be codified in the permit so as to provide an enforcement “shield” for those applicable requirements should it be determined that the negative applicability determination was made in error. “New” negative applicability determinations can be added later.

Non-NSR case-by-case determination- meeting/complying with emissions limitations “alternatively” or meeting/complying with an “alternative” emission limitation such as an AMOC (Alternative Means or Method Of Control) or an ARACT (Alternative Reasonably Available Control Technology). This also includes source-specific determinations for temporary sources of ambient impacts, or a visibility or increment analysis.

Adds/changes a term assumed to avoid another applicable requirement- federally enforceable emissions cap assumed to avoid classification as a modification under any provision of the FCAA, Title I OR an alternative emission limit approved pursuant to regulations promulgated under the FCAA, 112(i)(5) [Early Reductions]

“new AR” - refers to any applicable requirement not previously addressed or prohibited by the operating permit, not including any requirements under Title IV (Acid Rain). Applicable requirements under Acid Rain must follow the requirements in 122.414.
